Symbol legend:

.. not available for a specific reference period

0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded x suppressed to meet the confidentiality requirements of the Statistics Act

Footnotes:

- Aggregates are not always equal to the sum of their components from 1984 to 1996. This is caused by changing the set of relative prices when a new base year is adopted. To avoid any discontinuity, all levels of aggregation were linked back to 1984 using their original movement. For some of the lowest levels of aggregation, it is not possible to have an homogeneous series from 1984 to the present. For that reason, special industry groupings that provide relatively good continuity were created back
- ² For the Chained 2002 dollars, the aggregates are not equal to the sum of their components.
- ³ For data by special aggregates refer to CANSIM table 379-0026.
- ⁴ CANSIM tables 379-0025 and 379-0026 were archived and replaced by CANSIM table 379-0030.
