Statistics Sweden has departed from the principle that research and development (R & D) should be considered as support activities from November 2016. This means that most companies are found in industry 72 according to the Swedish Standard Industrial Classification 2007. [Changes in the classification of R&D and Ericsson AB](https://www.scb.se/en/About-us/news-and-press-releases/changes-in-the-classification-of-rd-and-ericsson-ab)

Time series break. As from the beginning of 2011, changes have been made to the way gainfully employed persons are classified in the Labour statistics based on administrative sources (RAMS statistics). These changes only affect people who are 65 and older and lead to an increase in the number of gainfully employed persons in this age group. In addition, the upper age limit to be classified as gainfully employed has been changed from age 84 to age 74. This implies that there are no gainfully employed persons who are 75 and older as of 2011. More information about the changes is available at [www.scb.se/rams](http://www.scb.se/rams).
