More than 100 dwellings	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

**Population:**

New figures for population 2012, 2013, 2014, 2015 and 2016. Model for delineation of the dwelling population has been slightly changed, so that there is a minor break in time series before and after 2012. The dwelling population is delineated using Matrikkelen (register for ground properties, addresses and buildings) and the Population register. Variables used are type of building, building status, type of utility unit and whether people are registered living in the utility unit or building. Holiday homes and utility units registered as other than dwelling are included in the population where the Population register state there are people registered on the dwelling address. The population register is also used to overrule other information, i.e. lack of approval certificate if people are registered living at the address. In addition, dwellings are imputed in buildings without utility units if people are registered on the building address.

**Type of building:**

Type of building is established according to function, combined buildings, for instance combined dwelling and business buildings and storage and production buildings, are grouped by the function that occupies the main part of the utility floor space. Other buildingtypes mainly includes dwellings in garages, industrial buildings and other non-residential buildings.

**Densely/sparsely populated areas:**

Grouped by delineation of urban settlements the previous year. Due to change in method for delineation in 2012/2013 there is a minor shift in 2013/2014.

Urban settlements are not delineated in Svalbard.

**region:**

Svalbard is not defined as a county in the legal sense, but in official statistics Svalbard is treated in the same way as the other counties in Norway.

year: 2021: Number of dwellings was corrected 26.04.2022. The correction mostly affects municipality K-1511
