- . Not possible to calculate
- : Hidden value

Description

Proportion of persons living in single-person households, as a percentage of the population as of 1 January.

To change the table, open the "change selection of...".

Three measures are available. Use the Measure button to select:

1. Persons = Number of persons

2. Per cent = Percentage

3. Ratio (Norway = 100) = Ratio between the county's rate and the national rate for a given year. Examples; ratio = 130 means that the county's rate is 30% higher than the national level. A ratio of 87 means that the county's rate is 13% lower than the national level

Rationale for indicator

People living alone are believed to be a potentially vulnerable group - economically and for health and social reasons.

Source

Statistics Norway

Collection

The statistics are based on the National Population Register data, information from the GAB register (Real Estate, Addresses and Buildings) and the Brønnøysund Register Centre. The updates in the Central Population Register (CPR) are done partly by the local Population Register offices, which are connected to the registry database via terminals, and partly centrally, by the Norwegian Tax Administration

Unmarried students who live away from their parental home are still registered at this address, and are included in their parents' households. People who, according to the Population Register, are resident in an institution are considered to belong to a common household. Many people who actually live in institutions, for example retirement and nursing homes, are registered as residents in private housing (with their spouse).

Interpretation and sources of error

As of 2014, the figures is different from Statistics Norway because a different definition of households is used in Norgeshelsa Statbank. Unmarried, students who are registered at the parents 'address are included in the parents' household.

Data quality

The quality of the data from the CPR is generally very good for statistical purposes. Certain groups however, are registered with a different residence than they actually have. In many cases this is because the registration rules are not followed (moving has not been registered) or the registration rules do not provide the actual address, e.g where unmarried students, according to the rules, should be registered as residents of their parents' home.

When numbers are missing

Statistics based on fewer than 3 cases are hidden for privacy reasons. The same applies if the population segment that cases are taken from is smaller than 10.

If more than 20 per cent of the numbers in a time series are hidden for privacy reasons, the entire series is hidden to avoid creating a biased impression of the situation in the county. Time series are also hidden where more than 50 per cent of the numbers in the time series are based on 6 or fewer cases. This is done to hide time series that are based on a too small numerical basis.
