2014	Total	76,1	68,8	71,1	77,0	80,0	82,1
	Females	72,9	68,6	67,7	76,4	74,5	77,4
	Males	79,3	69,0	75,0	77,7	84,7	86,0
2015	Total	76,3	67,8	72,6	76,1	81,4	82,6
	Females	72,6	65,1	68,9	72,2	77,0	80,3
	Males	80,1	71,0	76,6	80,3	85,6	84,6
2016	Total	76,1	69,9	68,8	77,3	78,6	84,4
	Females	73,2	66,8	64,9	74,4	77,8	82,0
	Males	79,0	73,9	73,0	80,1	79,2	86,7
2017	Total	77,1	66,3	74,7	78,7	81,6	83,4
	Females	74,7	62,2	69,5	80,2	80,3	83,4
	Males	79,4	71,5	80,1	77,5	83,0	83,5
2018	Total	76,7	66,2	70,2	78,7	81,7	85,9
	Females	72,6	61,9	65,0	75,3	79,6	82,8
	Males	80,6	71,2	75,5	81,8	83,6	88,5

Estimates for 2018 are preliminary.

Respondents were asked the following question about their health: In general do you feel you have very good, good, fair, poor or very poor health?

1: Very good

2: Good

3: Fair

4: Poor

5: Very poor

The table shows when those who say their health was good or very good and compares them with others. This classification is in accordance with the classification of OECD.

Unit:

Proportion of individuals (%):

The results come from Statistics on Income and Living conditions survey (SILC). The general research unit in SILC is the household. The sample is drawn on a random basis from the National Registry of Persons. The selected respondent provides all information about the living conditions of the household, their own conditions and the conditions of all other household members. Here the analysis is based on the selected respondent.

Income quintiles:

Total:

Here the disposable income distribution has been divided into 5 equal parts, so called income quintiles. Here the income quintiles are defined and analysed on an individual level. Each individual is considered to be on the same income quintile as the other members of their household. This is in accordance with the definition of disposable household income.
