

B18102: SEX BY AGE BY HEARING DIFFICULTY
Universe: Civilian noninstitutionalized population
2019 American Community Survey, 1-Year Estimates Detailed Tables

Label	Alaska	
	Estimate	Margin of Error
Total:	705 772	±2,037
Male:	359 167	±2,922
Under 5 years:	24 910	±1,461
With a hearing difficulty	259	±211
No hearing difficulty	24 651	±1,452
5 to 17 years:	68 190	±1,372
With a hearing difficulty	624	±297
No hearing difficulty	67 566	±1,400
18 to 34 years:	85 871	±2,752
With a hearing difficulty	880	±396
No hearing difficulty	84 991	±2,665
35 to 64 years:	136 108	±2,530
With a hearing difficulty	9 304	±1,460
No hearing difficulty	126 804	±2,848
65 to 74 years:	31 796	±1,545
With a hearing difficulty	6 054	±1,222
No hearing difficulty	25 742	±1,688
75 years and over:	12 292	±593
With a hearing difficulty	4 127	±703
No hearing difficulty	8 165	±742
Female:	346 605	±2,327
Under 5 years:	25 981	±1,425
With a hearing difficulty	187	±249
No hearing difficulty	25 794	±1,458
5 to 17 years:	60 591	±1,084
With a hearing difficulty	434	±417
No hearing difficulty	60 157	±1,188
18 to 34 years:	82 349	±1,981
With a hearing difficulty	394	±225
No hearing difficulty	81 955	±1,961
35 to 64 years:	132 837	±2,187
With a hearing difficulty	4 647	±1,107
No hearing difficulty	128 190	±2,427
65 to 74 years:	29 640	±1,151
With a hearing difficulty	2 878	±725
No hearing difficulty	26 762	±1,276
75 years and over:	15 207	±1,053
With a hearing difficulty	3 043	±875
No hearing difficulty	12 164	±1,261

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

The 2019 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols: * An "***" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

* An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution, or the margin of error associated with a median was larger than the median itself.

* An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.

* An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.

* An "***" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

* An "*****" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

* An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

* An "(X)" means that the estimate is not applicable or not available.
