

**B25116: TENURE BY HOUSEHOLD SIZE BY AGE OF HOUSEHOLDER**

Universe: Occupied housing units

2019 American Community Survey, 1-Year Estimates

Label	Alaska	
	Estimate	Margin of Error
Total:	252 199	±3,658
Owner occupied:	163 272	±3,761
1-person household:	36 311	±2,365
Householder 15 to 54 years	11 933	±1,582
Householder 55 to 64 years	10 034	±1,353
Householder 65 to 74 years	9 254	±1,233
Householder 75 years and over	5 090	±843
2-or-more person household:	126 961	±3,658
Householder 15 to 54 years	68 487	±3,247
Householder 55 to 64 years	28 564	±1,829
Householder 65 to 74 years	22 017	±1,728
Householder 75 years and over	7 893	±835
Renter occupied:	88 927	±2,868
1-person household:	32 798	±2,581
Householder 15 to 54 years	18 537	±1,952
Householder 55 to 64 years	6 335	±1,121
Householder 65 to 74 years	4 992	±1,156
Householder 75 years and over	2 934	±850
2-or-more person household:	56 129	±3,011
Householder 15 to 54 years	45 985	±2,726
Householder 55 to 64 years	7 657	±1,619
Householder 65 to 74 years	1 635	±504
Householder 75 years and over	852	±499

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The 2019 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols: \* An "\*\*\*" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

\* An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution, or the margin of error associated with a median was larger than the median itself.

\* An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.

\* An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.

\* An "\*\*\*" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

\* An "\*\*\*\*\*" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

\* An "N" entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

\* An "(X)" means that the estimate is not applicable or not available.
