Type of income :

Disposable income is the sum of all taxable and tax-free income minus taxes and negative transfers.

Primary income is the sum of income from employment and property income (income from capital, interest receipts and dividends).

Income is both including and excluding capital gains/losses, that is, the gain/loss arising from a sale (realization) of assets, for example, stocks, mutual funds or real estate.

Incomes are equivalised, which means that the household disposable income is adjusted for household size by using a weight system. The unit of measurement is equivalised disposable income for persons.

Gini coefficient :

The Gini coefficient measures the extent to which the distribution of income within a population deviates from a perfectly equal distribution. A coefficient of 0 expresses perfect equality where everyone has the same income, while a coefficient of 1 expresses full inequality where only one person has all the income.

At-risk-of-poverty rate :

The at-risk-of-poverty rate is the share of people with an equivalised disposable income below the at-risk-of-poverty threshold, which is set at 60 % of the national median equivalised disposable income.

High economic standard :

The high economic standard rate is the share of people with an equivalised disposable income higher than 200 % of the national median equivalised disposable income.

Relative median at-risk-risk-of-poverty gap :

The relative median at-risk-of-poverty gap is calculated as the difference between the median equivalised disposable income of people below the at-risk-of-poverty threshold and the at-risk-of-poverty threshold, expressed as a percentage of the at-risk-of-poverty threshold (cut-off point: 60 % of national median equivalised disposable income).

The population is delimited to so-called full-year households, which refers to households where the adults have been registered in Sweden at both the beginning and the end of the year. Read more about the delimitations in the statistics quality declaration on the Statistics Sweden website.

Income from wages, salaries and pensions from the Nordic countries is included for people who are registered in Sweden. As of the publication of the income year 2020, the statistics for the years 2011-2019 have been revised.
