The size and structure of the future population is determined by the last known yearly population and based on assumptions made for future fertility, mortality, and migration.

The calculations are based on observations over the last nine years and an assumption that these trends will continue. Both minor and major structural changes in society affect the development of the future population, which means that uncertainty is inherent in the projection. Please note that a population projection is only an estimate of what a future population might look like. Furthermore, uncertainty in the projection generally increases over the years.
