

**B06009: PLACE OF BIRTH BY EDUCATIONAL ATTAINMENT**  
**Universe: Population 25 years and over**  
**2020 American Community Survey, 5-Year Estimates Detailed Tables**

	Alaska	
	Estimate	Margin of Error
Total:	483 436	±429
Less than high school graduate	33 176	±1,516
High school graduate (includes equivalency)	137 486	±2,516
Some college or associate's degree	167 807	±2,750
Bachelor's degree	90 161	±2,021
Graduate or professional degree	54 806	±1,643
Born in state of residence:	137 855	±2,122
Less than high school graduate	13 430	±747
High school graduate (includes equivalency)	51 690	±1,538
Some college or associate's degree	46 282	±1,361
Bachelor's degree	18 259	±1,046
Graduate or professional degree	8 194	±672
Born in other state in the United States:	283 706	±2,651
Less than high school graduate	12 134	±801
High school graduate (includes equivalency)	68 040	±1,852
Some college or associate's degree	103 107	±2,133
Bachelor's degree	59 845	±1,785
Graduate or professional degree	40 580	±1,358
Native; born outside the United States:	12 279	±1,217
Less than high school graduate	644	±215
High school graduate (includes equivalency)	3 405	±658
Some college or associate's degree	4 356	±514
Bachelor's degree	2 586	±455
Graduate or professional degree	1 288	±345
Foreign born:	49 596	±1,646
Less than high school graduate	6 968	±722
High school graduate (includes equivalency)	14 351	±953
Some college or associate's degree	14 062	±939
Bachelor's degree	9 471	±863
Graduate or professional degree	4 744	±602

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2020, the 2020 Census provides the official counts of the population and housing units for the nation, states, counties, cities, and towns. For 2016 to 2019, the Population Estimates Program provides estimates of the population for the nation, states, counties, cities, and towns and intercensal housing unit estimates for the nation, states, and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Source: U.S. Census Bureau, 2016-2020 American Community Survey 5-Year Estimates

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The 2016-2020 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution.

N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X) The estimate or margin of error is not applicable or not available.

median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")

median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").

\*\* The margin of error could not be computed because there were an insufficient number of sample observations.

\*\*\* The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.

\*\*\*\*\* A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
