

BI7003: POVERTY STATUS IN THE PAST 12 MONTHS OF INDIVIDUAL BY SEX BY EDUCATIONAL ATTAINMENT

Universe: Population 25 years and over for whom poverty status is determined

2020 American Community Survey, 5-Year Estimates Detailed Tables

	Alaska	Margin of Error
	Estimate	
Total:	476 039	±455
Income in the past 12 months below poverty level:	39 945	±1,634
Male:	18 811	±872
Less than high school graduate	3 214	±396
High school graduate (includes equivalency)	9 088	±636
Some college, associate's degree	4 766	±563
Bachelor's degree or higher	1 743	±341
Female:	21 134	±1,137
Less than high school graduate	3 537	±430
High school graduate (includes equivalency)	9 169	±757
Some college, associate's degree	6 121	±612
Bachelor's degree or higher	2 307	±364
Income in the past 12 months at or above poverty level:	436 094	±1,695
Male:	226 172	±1,006
Less than high school graduate	13 951	±916
High school graduate (includes equivalency)	67 191	±1,464
Some college, associate's degree	81 143	±1,786
Bachelor's degree or higher	63 887	±1,623
Female:	209 922	±1,191
Less than high school graduate	11 467	±773
High school graduate (includes equivalency)	48 458	±1,484
Some college, associate's degree	73 653	±1,760
Bachelor's degree or higher	76 344	±1,357

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2020, the 2020 Census provides the official counts of the population and housing units for the nation, states, counties, cities, and towns. For 2016 to 2019, the Population Estimates Program provides estimates of the population for the nation, states, counties, cities, and towns and intercensal housing unit estimates for the nation, states, and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Source: U.S. Census Bureau, 2016-2020 American Community Survey 5-Year Estimates

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The 2016-2020 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- : The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution.

N : The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X) : The estimate or margin of error is not applicable or not available.

median- : The median falls in the lowest interval of an open-ended distribution (for example "2,500-")

median+ : The median falls in the highest interval of an open-ended distribution (for example "250,000+").

** : The margin of error could not be computed because there were an insufficient number of sample observations.

*** : The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.

***** : A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
