

B25007: TENURE BY AGE OF HOUSEHOLDER
Universe: Occupied housing units
2020 American Community Survey 5-Year Estimates

	Alaska	
	Estimate	Margin of Error
Total:	255 173	±1,326
Owner occupied:	165 376	±1,894
Householder 15 to 24 years	1 445	±292
Householder 25 to 34 years	18 470	±987
Householder 35 to 44 years	29 140	±1,023
Householder 45 to 54 years	32 579	±980
Householder 55 to 59 years	20 460	±767
Householder 60 to 64 years	19 299	±830
Householder 65 to 74 years	29 855	±674
Householder 75 to 84 years	11 177	±544
Householder 85 years and over	2 951	±320
Renter occupied:	89 797	±1,820
Householder 15 to 24 years	10 716	±783
Householder 25 to 34 years	27 684	±1,170
Householder 35 to 44 years	16 117	±926
Householder 45 to 54 years	13 941	±998
Householder 55 to 59 years	6 479	±430
Householder 60 to 64 years	5 282	±527
Householder 65 to 74 years	6 674	±462
Householder 75 to 84 years	2 091	±292
Householder 85 years and over	813	±176

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2020, the 2020 Census provides the official counts of the population and housing units for the nation, states, counties, cities, and towns. For 2016 to 2019, the Population Estimates Program provides estimates of the population for the nation, states, counties, cities, and towns and intercensal housing unit estimates for the nation, states, and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Technical Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The 2016-2020 American Community Survey (ACS) data generally reflect the September 2018 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances, the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineation lists due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution.

N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X) The estimate or margin of error is not applicable or not available.

median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")

median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").

** The margin of error could not be computed because there were an insufficient number of sample observations.

*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.

***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
