Description

Mortality rate. Number of deaths and deaths per 100 000 persons per year.

The statistics include all persons registered as a resident of Norway at the time of death, regardless of whether the death occurred in Norway or abroad. Rates are age and gender standardised to reduce the effect of differing distributions when groups are compared over time and between geographical regions. Yearly figures are adjusted according to 5-year age groups in the Norwegian population per 1 January 2012.

To change the table, open the "change selection of...".

Three measures are available. Use the Measure button to select:

1. Number of deaths per year = Number of deaths per year (Only shown for Norway, for privacy reasons)
2. Deaths per 100 000 persons per year, standardised = Number of deaths per 100 000 inhabitants* per year (rate). Standardised for age and gender composition

3. Standardised ratio (Norway = 100) = Ratio between the county's standardised rate and the national rate for a given year. Examples; ratio = 130 means that the county's standardised rate is 30% higher than the national level. A ratio of 87 means that the county's rate is 13% lower than the national level.

Comment on publication August 2019:

For the years 2014 to 2016, the figures may differ slightly from what has been published previously. This is due to errors in previously delivered data from the data provider.

Source

Statistics Norway

Collection

Deaths are reported to the population registry in the deceased person's municipality of residence. Reports of deaths abroad of Norwegian residents are received via the Ministry of Foreign Affairs or the Norwegian Maritime Directorate.

Data quality

The quality of death notices is generally very good and there is little delay in reporting. Some people emigrate without notifying the population register, but this has no significant effect on mortality calculations.

Statistical analysis

Standardiseringsmetoden som er benyttet er direkte standardisering med fast standardbefolkning som referanse. Standardbefolkning er summen av menn og kvinner i 5-årige aldersgrupper per 1. januar 2012

When numbers are missing

Statistics based on fewer than 3 cases is hidden to protect the identity of the persons. Figures are also hidden when the population group in which the cases originate, is smaller than 10 persons. If more than 20 per cent of the cases in a time series are hidden due to the abovementioned reasons, the complete time series is hidden to avoid giving a skewed impression.

Some values are hidden to prevent their use in calculating a value hidden for privacy reasons.

The entire time series is removed if over half the rates are based on 6 or fewer deaths. This is because of reduced reliability.

Time periods

1990-2020

Geographical level

Country, health region, counties

Gender

Both genders, men, women

Age groups

All ages, 0-74 years and 75 years and over.
