Calculated 5 year moving average for Åland and Iceland, including the listed year and the 4 previous years (e.g. 2005 = average 2001-2005).

Data is masked so as to conceal cells with very low numbers (cells with 1-4 are masked). A cell with the symbol ... indicates masked data. Totals for Men, Women, Men and Women as well as All ages may be masked as well, if only one cell of those that make up the total is masked.

A hospital discharge is defined as the release of a patient who has been admitted to an in-patient hospital unit and has stayed for at least one night (>24 hours). A person is discharged when treatment has been finalized, either to their home or to another healthcare facility, for further treatment or rehabilitation. Hospital stays which end due to individuals leaving against medical advice or by in-hospital deaths are also counted. Same-day discharges are excluded. The data covers all types of hospitals, including general hospitals, psychiatric care hospitals and other specialized hospitals.

Units: Per 100 000□

Internal reference code: DISCHA01
