B01001C: SEX BY AGE (AMERICAN INDIAN AND ALASKA NATIVE ALONE)

Universe: People who are American Indian and Alaska Native alone 2022 American Community Survey, 1-Year Estimates Detailed Tables

	Alaska	
	Estimate	Margin of Error
Total:	95,268	±4,155
Male:	47,948	±2,187
Under 5 years	3,470	±559
5 to 9 years	4,655	±636
10 to 14 years	4,814	±528
15 to 17 years	2,122	±501
18 and 19 years	1,451	±468
20 to 24 years	3,894	±685
25 to 29 years	2,932	±500
30 to 34 years	3,819	±639
35 to 44 years	5,899	±707
45 to 54 years	3,939	±530
55 to 64 years	6,359	±733
65 to 74 years	3,289	±400
75 to 84 years	1,087	±203
85 years and over	218	±146
Female:	47,320	±2,827
Under 5 years	3,642	±649
5 to 9 years	4,418	±849
10 to 14 years	4,357	±689
15 to 17 years	2,702	±485
18 and 19 years	1,382	±410
20 to 24 years	3,369	±691
25 to 29 years	3,813	±931
30 to 34 years	3,864	±680
35 to 44 years	4,614	±1,173
45 to 54 years	4,528	±798
55 to 64 years	5,414	±582
65 to 74 years	3,478	±432
75 to 84 years	1,484	±378
85 years and over	255	±146

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and

Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The Hispanic origin and race codes were updated in 2020. For more information on the Hispanic origin and race code changes, please visit the American Community Survey Technical Documentation website.

The 2022 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.

N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X) The estimate or margin of error is not applicable or not available.

 $median\ The\ median\ falls\ in\ the\ lowest\ interval\ of\ an\ open\-ended\ distribution\ (for\ example\ "2,500-")$

median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").

- ** The margin of error could not be computed because there were an insufficient number of sample observations.
- *** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.
- ***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
