

B06009: PLACE OF BIRTH BY EDUCATIONAL ATTAINMENT
Universe: Population 25 years and over in the United States
2022 American Community Survey, 1-Year Estimates Detailed Tables

	Alaska	Margin of Error
Total:	489,218	±1,732
Less than high school graduate	32,669	±3,338
High school graduate (includes equivalency)	142,455	±6,252
Some college or associate's degree	164,448	±5,830
Bachelor's degree	94,168	±4,883
Graduate or professional degree	55,478	±4,255
Born in state of residence:	141,948	±4,599
Less than high school graduate	12,596	±1,842
High school graduate (includes equivalency)	56,908	±3,657
Some college or associate's degree	44,342	±3,409
Bachelor's degree	19,194	±2,541
Graduate or professional degree	8,908	±1,514
Born in other state in the United States:	283,965	±5,353
Less than high school graduate	11,193	±1,722
High school graduate (includes equivalency)	65,720	±4,445
Some college or associate's degree	103,014	±4,658
Bachelor's degree	64,373	±4,660
Graduate or professional degree	39,665	±3,617
Native; born outside the United States:	12,674	±2,409
Less than high school graduate	642	±356
High school graduate (includes equivalency)	3,831	±1,493
Some college or associate's degree	3,819	±1,076
Bachelor's degree	2,450	±996
Graduate or professional degree	1,932	±844
Foreign born:	50,631	±4,261
Less than high school graduate	8,238	±1,905
High school graduate (includes equivalency)	15,996	±2,265
Some college or associate's degree	13,273	±1,973
Bachelor's degree	8,151	±1,621
Graduate or professional degree	4,973	±1,412

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Source: U.S. Census Bureau, 2022 American Community Survey 1-Year Estimates

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The 2022 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.

N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X) The estimate or margin of error is not applicable or not available.

median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")

median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").

** The margin of error could not be computed because there were an insufficient number of sample observations.

*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.

***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
