

**B18101: SEX BY AGE BY DISABILITY STATUS**  
**Universe: Civilian noninstitutionalized population**  
**2022 American Community Survey, 1-Year Estimates Detailed Tables**

	Alaska	
	Estimate	Margin of Error
Total:	701,511	±2,509
Male:	358,794	±3,352
Under 5 years:	23,043	±1,511
With a disability	16	±29
No disability	23,027	±1,512
5 to 17 years:	65,955	±1,836
With a disability	4,039	±957
No disability	61,916	±2,080
18 to 34 years:	83,456	±2,322
With a disability	6,992	±1,457
No disability	76,464	±2,485
35 to 64 years:	136,744	±1,910
With a disability	19,758	±2,141
No disability	116,986	±2,870
65 to 74 years:	34,552	±1,005
With a disability	10,643	±1,492
No disability	23,909	±1,296
75 years and over:	15,044	±576
With a disability	7,998	±999
No disability	7,046	±937
Female:	342,717	±2,592
Under 5 years:	23,454	±1,016
With a disability	500	±333
No disability	22,954	±989
5 to 17 years:	62,896	±1,678
With a disability	2,832	±894
No disability	60,064	±1,857
18 to 34 years:	77,994	±1,687
With a disability	8,225	±1,878
No disability	69,769	±2,594
35 to 64 years:	127,984	±1,492
With a disability	16,565	±1,720
No disability	111,419	±2,179
65 to 74 years:	33,621	±1,024
With a disability	7,690	±1,286
No disability	25,931	±1,504
75 years and over:	16,768	±830
With a disability	7,597	±1,226
No disability	9,171	±1,185

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units for states and counties.

Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Source: U.S. Census Bureau, 2022 American Community Survey 1-Year Estimates

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

The 2022 American Community Survey (ACS) data generally reflect the March 2020 Office of Management and Budget (OMB) delineations of metropolitan and micropolitan statistical areas. In certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB delineations due to differences in the effective dates of the geographic entities.

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.

N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X) The estimate or margin of error is not applicable or not available.

median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")

median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").

\*\* The margin of error could not be computed because there were an insufficient number of sample observations.

\*\*\* The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.

\*\*\*\*\* A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
