Results are from EU-SILC.

In some cases the group behind the analysis is so small that the confidence intervals equal more than 1/3 of the value (such as the given value is 9%, CI +/- 4%). In these cases results are not published.

Tenants at reduced rate are those renting at reduced rate, such as from the municipalities or student associations. Some tenants do not pay rent (rent-free), but might nevertheless bear some housing costs. Those that do not rent at reduced rate are considered paying market rate.
