

B15002: SEX BY EDUCATIONAL ATTAINMENT FOR THE POPULATION 25 YEARS AND OVER

Universe: Population 25 years and over

2023 American Community Survey, 1-Year Estimates Detailed Tables

	Alaska	
	Estimate	Margin of Error
Total:	493,892	±2,853
Male:	256,519	±2,723
No schooling completed	3,382	±1,043
Nursery to 4th grade	643	±424
5th and 6th grade	472	±353
7th and 8th grade	1,847	±547
9th grade	1,891	±629
10th grade	2,303	±594
11th grade	4,161	±825
12th grade, no diploma	4,181	±1,011
High school graduate (includes equivalency)	84,441	±4,025
Some college, less than 1 year	17,487	±2,265
Some college, 1 or more years, no degree	41,308	±3,256
Associate's degree	20,963	±2,503
Bachelor's degree	47,157	±4,363
Master's degree	17,192	±2,182
Professional school degree	4,639	±995
Doctorate degree	4,452	±1,054
Female:	237,373	±1,822
No schooling completed	3,187	±882
Nursery to 4th grade	395	±273
5th and 6th grade	738	±320
7th and 8th grade	712	±239
9th grade	1,650	±814
10th grade	2,629	±692
11th grade	3,305	±756
12th grade, no diploma	1,965	±625
High school graduate (includes equivalency)	59,166	±3,414
Some college, less than 1 year	18,792	±2,444
Some college, 1 or more years, no degree	38,005	±2,462
Associate's degree	21,062	±1,982
Bachelor's degree	51,934	±3,381
Master's degree	26,026	±2,855
Professional school degree	4,689	±1,163
Doctorate degree	3,118	±934

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, the decennial census is the official source of population totals for April 1st of each decennial year. In between censuses, the Census Bureau's Population Estimates Program produces and disseminates the official estimates of the population for the nation, states, counties, cities, and towns and estimates of housing units and the group quarters population for states and counties.

Information about the American Community Survey (ACS) can be found on the ACS website. Supporting documentation including code lists, subject definitions, data accuracy, and statistical testing, and a full list of ACS tables and table shells (without estimates) can be found on the Technical Documentation section of the ACS website.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Source: U.S. Census Bureau, 2023 American Community Survey 1-Year Estimates

ACS data generally reflect the geographic boundaries of legal and statistical areas as of January 1 of the estimate year. For more information, see Geography Boundaries by Year.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see ACS Technical Documentation). The effect of nonsampling error is not represented in these tables.

Users must consider potential differences in geographic boundaries, questionnaire content or coding, or other methodological issues when comparing ACS data from different years. Statistically significant differences shown in ACS Comparison Profiles, or in data users' own analysis, may be the result of these differences and thus might not necessarily reflect changes to the social, economic, housing, or demographic characteristics being compared. For more information, see [Comparing ACS Data](#).

Estimates of urban and rural populations, housing units, and characteristics reflect boundaries of urban areas defined based on 2020 Census data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

- The estimate could not be computed because there were an insufficient number of sample observations. For a ratio of medians estimate, one or both of the median estimates falls in the lowest interval or highest interval of an open-ended distribution. For a 5-year median estimate, the margin of error associated with a median was larger than the median itself.

N The estimate or margin of error cannot be displayed because there were an insufficient number of sample cases in the selected geographic area.

(X) The estimate or margin of error is not applicable or not available.

median- The median falls in the lowest interval of an open-ended distribution (for example "2,500-")

median+ The median falls in the highest interval of an open-ended distribution (for example "250,000+").

** The margin of error could not be computed because there were an insufficient number of sample observations.

*** The margin of error could not be computed because the median falls in the lowest interval or highest interval of an open-ended distribution.

***** A margin of error is not appropriate because the corresponding estimate is controlled to an independent population or housing estimate. Effectively, the corresponding estimate has no sampling error and the margin of error may be treated as zero.
