Note: Survivors refer to the youngest age in the first column. E.g. in 1986 - 1990 there would have been 9,751 one-year-old boys in a generation of 10,000. Mortality rate denotes the risk of dying between the two ages shown in the first column. Mean life expectancy: The average of the remaining years for a group of contemporaries die at a time not indicated in the mortality table.
