## B14005. SEX BY SCHOOL ENROLLMENT BY EDUCATIONAL ATTAINMENT BY EMPLOYMENT STATUS FOR THE POPULATION 16 TO 19 YEARS - Universe: POPULATION 16 TO 19 YEARS

Data Set: [2005 American Community Survey](#)

Survey: 2005 American Community Survey

NOTE. Data are limited to the household population and exclude the population living in institutions, college dormitories, and other group quarters. For information on confidentiality protection, sampling error, nonsampling error, and definitions, see [Survey Methodology](#).

	Alaska	
	Estimate	Margin of Error
Total:	43,073	+/-1,848
Male:	22,136	+/-1,227
Enrolled in school:	17,804	+/-1,373
Employed	5,266	+/-1,239
Unemployed	1,951	+/-760
Not in labor force	10,587	+/-1,392
Not enrolled in school:	4,332	+/-880
High school graduate:	2,936	+/-709
Employed	1,569	+/-616
Unemployed	590	+/-325
Not in labor force	777	+/-387
Not high school graduate:	1,396	+/-597
Employed	605	+/-348
Unemployed	18	+/-29
Not in labor force	773	+/-433
Female:	20,937	+/-1,301
Enrolled in school:	15,495	+/-1,223
Employed	5,706	+/-989
Unemployed	1,294	+/-509
Not in labor force	8,495	+/-1,041
Not enrolled in school:	5,442	+/-1,166
High school graduate:	2,824	+/-728
Employed	2,093	+/-625
Unemployed	181	+/-194
Not in labor force	550	+/-317
Not high school graduate:	2,618	+/-1,058
Employed	1,105	+/-577
Unemployed	447	+/-368
Not in labor force	1,066	+/-672

Source: U.S. Census Bureau, 2005 American Community Survey

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see [Accuracy of the Data](#)). The effect of nonsampling error is not represented in these tables.

Employment and unemployment estimates may vary from the official labor force data released by the Bureau of Labor Statistics because of differences in survey design and data collection. For guidance on differences in employment and unemployment estimates from different sources go to [Labor Force Guidance](#).

### Explanation of Symbols:

1. An '\*' entry in the margin of error column indicates that too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '\*\*' entry in the margin of error column indicates that no sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
3. An '-' entry in the estimate column indicates that no sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
4. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
5. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
6. An '\*\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
7. An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
