Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a confidence interval. The interval shown here is a 90 percent confidence interval. The stated range can be interpreted roughly as providing a 90 percent probability that the interval defined by the lower and upper bounds contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see <a href="Accuracy of the Data">Accuracy of the Data</a>). The effect of nonsampling error is not represented in these tables.

Occupation codes are 4-digit codes, but are still based on Standard Occupational Classification 2000.

- Explanation of Symbols:

  1. An " entry in the lower and upper bound columns indicates that too few sample observations were available to compute a standard error and thus the lower and upper bounds. A statistical test is not appropriate.

  2. An "" entry in the lower and upper bound columns indicates that no sample observations were available to compute a standard error and thus the lower and upper bounds. A statistical test is not appropriate.

  3. An '- entry in the estimate column indicates that no sample observations were available to compute an estimate.

  4. An '- 'following a median estimate means the median falls in the lowest interval of an open-ended distribution.

  5. An '-\* following a median estimate means the median falls in the upper interval of an open-ended distribution.

  6. An "\*" entry in the lower and upper bound columns indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
