Notes

The 2001 Supplementary Survey universe is limited to the household population and excludes the population living in institutions, college dormitories, and other group quarters. Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate is represented through the use of a confidence interval. The confidence interval computed here is a 90 percent confidence interval and can be interpreted roughly as providing 90 percent certainty that the true number falls between the lower and upper bounds.

Industry categories adhere to the guidelines issued in Clarification Memorandum No. 2, "NAICS Alternate Aggregation Structure for Use By U.S. Statistical Agencies," issued by the Office of Management and Budget.

Click on the table title to access subject characteristics and code lists related to this table.

1. An '\*' entry in the lower and upper bound columns indicates that too few sample observations were available to compute a standard 

open-ended distribution. A statistical test is not appropriate. 7. An "\*\*\*\*\* entry in the lower and upper bound columns indicates that the estimate is controlled. A statistical test is not appropriate.
