Notes

The 2002 American Community Survey universe is limited to the household population and excludes the population living in institutions, college dormitories, and other group quarters. Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate is represented through the use of a confidence interval. The confidence interval computed here is a 90 percent confidence interval and can be interpreted roughly as providing 90 percent certainty that the true number falls between the lower and upper bounds.

1. An "-" entry in the lower and upper bound columns indicates that too few sample observations were available to compute a standard error and thus the lower and upper bounds. A statistical test is not appropriate.
2. An "##" entry in the lower and upper bound columns indicates that no sample observations were available to compute a standard error and thus the lower and upper bounds. A statistical test is not appropriate.
3. An "L" entry in the estimate column indicates that no sample observations were available to compute an estimate.
4. An "L" following a median estimate means the median falls in the lowest interval of an open-ended distribution.
5. An "U" following a median estimate means the median falls in the upper interval of an open-ended distribution.
6. An "****" entry in the lower and upper bound columns indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
7. An "*****" entry in the lower and upper bound columns indicates that the estimate is controlled. A statistical test is not appropriate.
