Description

New cases of cancer, per 100 000 persons of the same gender and age group, per year.

Age standardised rates are used to reduce the effect of differing age distributions when groups are compared over time and between geographical regions. Yearly figures are adjusted according to 5-year age groups in the Norwegian population per 1 January 1981.

Cancer types are coded according to the International Classification of Diseases version 10 (ICD-10).

Cancer types (ICD-10 codes):

- Malignant tumours, all (C00-C96) *
- Cancer of the stomach (C16)
- Cancer of the colon (C18)
- Cancer of the rectum (C19-C21)
- Lung cancer (C33-C34)
- Malignant melanoma (C43)
- Breast cancer, women (C50)
- Cancer of the cervix, women (C53)
- Cancer of the prostate, men (C61)

* C97 is not published by the Cancer Registry.

Notes

The data may differ somewhat from the "Cancer in Norway" publication, partly because the Cancer Registry uses a different standard population for age standardization. Data in Norhealth are coded according to the International Classification of Diseases version 10 (ICD-10), while Cancer Registry data are coded according to ICD-7/ICD-O-2/ICD-O-3.

Source

The Cancer Registry of Norway

Collection

The Cancer Registry of Norway has registered all new cases of cancer in Norway since 1953. New cases of cancer are reported from several sources: all physicians have a duty to report cancerous diseases to the Cancer Registry, pathological laboratories send results of tissue- and cell tests, and Statistics Norway send notifications of deaths caused by cancer.

Data quality

Very high data quality. All notifications are personally identifiable, enabling better quality controls concerning completeness and correctness of notifications.

Time periods

1970-2009

Geographical level

Country, counties, 4 main cities (Oslo, Stavanger, Bergen and Trondheim)

Gender

Men, women

Age groups

All ages, 0-44, 45-64, 65 years and older

Frequency of updates

Annually
