Description

Description: Number of overnight stays in somatic hospitals in Norway per 1000 inhabitants per year.

Patients of rehabilitation and psychiatric wards, and mothers of healthy new borns are excluded.

The data is not adjusted for the population's age distribution. Hospital stays are counted in the year in which the patient is released from hospital.

Data Source/Origin of data

Source: Directorate for Health and Social Affairs/Norwegian Patient Register (NPR)

Collection: The Norwegian Patient Register contains information on all patients who are admitted to a hospital or who are examined/treated at a hospital's outpatient ward/clinic. The register receives this information regularly from hospitals and other somatic health institutions that are funded by regional health authorities with an output-based payment system. The figures presented in Norhealth are for patients admitted to hospital for an overnight stay. Statistics Norway received Norwegian Patient Register data from SINTEF Unimed from 1997-2006. From 2007 onwards, the Directorate for Health and Social Affairs are responsible for the Norwegian Patient Register. Nationally representative data.

Data quality: It is reasonable to assume that the register is accurate since hospitals receive refunds for each patient treated and they are not likely to fabricate admissions. There are, however, some differences between hospitals in registering of patients who are dead on arrival. Reports from hospitals have become more comprehensive in the 1990s. The patient register has not received data from a few small hospitals for some of the years.

On 1 February 2007, the Health Register Act was revised to acknowledge the Norwegian Patient Register as the 8th official health register in Norway. This means that from 15 April 2009, the register will be individually based, with use of internal cryptic codes for a person's identity. This will overcome the main limitation of the register which has been that it doesn't use unique patient identification numbers. Each hospital generated its own anonymous patient numbers each year, making it impossible to trace a patient from one hospital to another, or from year to year.

Divided by

Time periods: 1989-2007

Geographical level: Country, counties

Gender: Both genders, men, women

Age groups: All ages, 0-14, 15-24, 25-44, 45-64, 65-74, 75-84, 85 years and over

Frequency of updates: Annual
