PLEASE NOTE:

For further information including maps, definitions, and data sources please click on region name and indicator name links.

All indicators with the exception of those specific to physicians are based on a data collection period of April 1 - March 31. Physician indicators derive from the period January 1 - December 31.

† Figures suppressed due to small numbers or incomplete data

.. Figures not available

^A Statistically different from the average (Canada) rate ($p \leq 0.05$)

‡ The Canada rate includes only those provinces/territories for which comparable data were available.

* Statistically significant Disparity rate ratio or Potential rate reduction

1. For PEI, the Yukon, the Northwest Territories and Nunavut, the entire province or territory is included as a region.

2. Canadian, provincial and territorial rates are based on October 1 population estimates. Regional rates are based on July 1 population estimates.

3. Hospitalization data for 2006–2007 for Peace Country Health Region in Alberta were incomplete therefore the indicator could not be calculated for this region.

4. Beginning with data year 2006, the definition for ACSC was revised. Rates back to data year 2001 were calculated using the new definition (see ACSC 2006 revision) to enable comparisons over time.

5. Hospitalization data for 2008–2009 for Area 8 (Peace Country) in Alberta was incomplete, therefore the indicator could not be calculated for this region.

6. Cardiac procedures for residents of Zone 4 and 5, New Brunswick, are performed mostly in Quebec; rates are suppressed due to differences in data collection and unavailability of data from Quebec.

7. Rates for Quebec are not available due to differences in data collection.
