Note(s)

i. Census metropolitan areas and census agglomerations crossing provincial boundaries
There is one census metropolitan area (Ottawa - Gatineau) and three census agglomerations (Campbellton, Hawkesbury and Lloydminster) that cross provincial boundaries. The data for their respective provincial parts are included with the appropriate census metropolitan area or census agglomeration, with data for the census metropolitan area or census agglomeration within the province of the provincial part that contributes the majority of the population to the area. For example, Ottawa - Gatineau can be found in Ontario, Campbellton in New Brunswick, Hawkesbury in Ontario and Lloydminster in Alberta.

Total - Family households

Teamly households refers to a household that contains at least one census family, that is, a married couple with or without children, or a couple living common-law with or without children, or a lone parent living with one or more children (lone-parent family). 'One-family household' refers to a single census family (with or without other non-family persons) that occupies a private dwelling. 'Multiple-family household' refers to a household in which two or more census families (with to without additional non-family persons) cocupy the same private dwelling.

Total - Family households

"Family household refers to a household that contains at least one census family, that is, a married couple with or without children, or a couple living common-law with or without children, or a lone parent living with one or more children (lone-parent family). "One-family household' refers to a single census family (with or without other non-family persons) that occupies a private dwelling. "Multiple-family household' refers to a household in which two or more census families (with or without additional non-family persons) occupy the same private dwelling.

'Non-family household' refers to either one person living alone in a private dwelling or to a group of two or more people who share a private dwelling, but who do not constitute a census family

3. 2000

adian censuses were conducted in 2001 and 2006. Income data from these censuses relate to the calendar year prior to the census year, i.e., 2000 and 2005 respectively. For additional information, please refer to the 2006 Census Dictionary, Catalogue no. 92-566-XWE.

2005

Canadian censuses were conducted in 2001 and 2006. Income data from these censuses relate to the calendar year prior to the census year, i.e., 2000 and 2005 respectively. For additional information, please refer to the 2006 Census Dictionary, Catalogue no. 92-566-XWE.

Total - Household income groups

Household total income - The total income of a household is the sum of the total incomes of all members of that household.

Total income refers to the total money income received from the following sources during calendar year 2005 by persons 15 years of age and over:

- wages and salaries (total)
 net farm income
 net non-farm income from unincorporated business and/or professional practice
 child benefits.

- child benefits
 Old Age Security pension and Guaranteed Income Supplement
 benefits from Canada or Quebec Pension Plan
 benefits from Employment Insurance
 other income from government sources
 dividends, interest on bonds, deposits and savings certificates, and other investment incor
 retirement pensions, superannuation and annuities, including those from RRSPs and RRIFs
 other money income.

After-tax income of households - The after-tax income of a household is the sum of the after tax incomes of all members of that household. After-tax income of household members refers to total income from all sources minus federal, provincial and territorial taxes paid for 2005.

Receipts not counted as income - The income concept excludes gambling gains and losses, lottery prizes, money inherited during the year in a lump sum, capital gains or losses, receipts from the sale of property, income tax refunds, loan payments received, lump-sum settlements of insurance policies, rebates received on property taxes, refunds of pension contributions as well as all income in kind," such as free meals and living accommodations, or agricultural products produced and consumed on the farm.

Average income of families (census/economic), persons 15 years of age and over not in families, and households - Average income of families (census/economic) or persons 15 years of age and over not in families or households refers to the weighted mean total income of families (census/economic), persons 15 years of age and over not in families, or households in 2005. Average income is calculated from unrounded data by different income of a specified group of families (for example, husband-wife families with working wives) or persons not in families or households (for example, two person households) by the number of familie persons not in families, or households in that respective group, whether or not they reported income.

Median income of families (census/economic), persons 15 years of age and over not in families, and households - The median income of a specified group of families (census/economic), persons 15 years of age and over not in families, or households is that amount which divides their income size distribution, ranked by size of income, into two halves. That is, the incomes of the first half of the families, persons 15 years of age and over not in families, or households are below the median, while those of the second half are above the median. Median incomes of families (census/economic), persons 15 years of age and over not in families, or households are normally calculated for all units in the specified group, whether or not they reported income.

Standard error of average income - Refers to the estimated standard error of average income for an income size distribution. If interpreted as shown below, it serves as a rough indicator of the precision of the corresponding estimate of average income. For about 68% of the samples which could be selected from the sample frame, the difference between the sample estimate of average income and the corresponding figure based on complete enumeration would be less than one standard error. For about 95% of the possible samples, the difference would be less than two standard errors and, in about 99% of the samples, the difference would be approximately two and a half standard errors.

The above concept and procedures also apply in the calculation of these statistics on the after-tax income of families (census/economic), persons not in families and households.

Household - Refers to a person or a group of persons (other than foreign residents) who occupy the same dwelling and do not have a usual place of residence elsewhere in Canada. It may consist of a family group (census family) with or without other non-family persons, of two or more families sharing a dwelling, of a group of unrelieted persons, or of one persons living alone. Household members who are temporarily absent on Census Day (e.g., temporary residents elsewhere) are considered as part of their usual household. For census purposes, every person is a member of one and only one household. Unless otherwise specified, all data in household reports. (e.g., temporary residents elseware for private households only.

Households are classified into three groups: private households, collective households and households outside Canada.

Household, private - Refers to a person or a group of persons (other than foreign residents) who occupy a private dwelling and do not have a usual place of residence elsewhere in Canada.

A Data quality note(s)

• Data quality index showing, for the long census questionnaire (20% sample data), a global non response rate higher than or equal to 5% but lower than 10%
