Footnotes:

- The alphanumeric codes appearing in square brackets besides each industry title represent the identification code of the North American Industry Classification System (NAICS) -based classification for use with the Canadian System of National Accounts (SNA-NAICS). The identification scheme uses a two-digit code to represent industries at the Small (S) level of aggregation. A three-digit code is used to represent industries at the Medium (M) level of aggregation and a four-digit code is used to represent industries at the Historical-Link (L) level of aggregation. In most cases, the alphanumeric identification code is identical to the NAICS codes the industries represent. In some cases, however, the identification code represent a combination of NAICS industries, whose definition can easily be obtained by referring to the full classification provided in the Survey or Program Details Record 1401 attached to these web pages.
- Beginning with reference year 2007 the Input-Output tables are based on North American Industry Classification System (NAICS) 2007. The 2002 to 2006 Input-Output tables are based on NAICS 2002 and the 1997 to 2001 Input-Output tables are based on NAICS 1997. The implementation of NAICS 2007 into the 2007 Input-Output tables has increased the number of industries from 122 to 123 that are disseminated in this table. The changes have an impact on the working level categories that are used to estimate this table. The changes to the working level categories are limited to NAICS sector 51, Information and Cultural Industries, where the number of working level industries were restructured and decreased from 13 to 10. For more information on the changes to the working level categories as a result of NAICS 2007 implementation, please contact Industry Accounts Division - (613) 951-3659. Methodological information can be found in the document 'Implementing a NAICS-Based Time Series into the Canadian System of National Accounts' (in PDF format) at <http://www.statcan.gc.ca/imdb-bmdi/1401-eng.htm> which explains the differences between the two series.
- The input-output tables are built around three classification systems, namely the Input-Output Industry Classification (IOIC) for industries, the Input-Output Commodity Classification (IOCC) for commodities and the Input-Output Final Demand Classification (IOFDC) for final demand. Each classification has four levels of hierarchy, consisting of the "W" (working) level, the "L" (historical-link) level, the "M" (medium) level and the "S" (small) level. The Input-Output Industry Classification (IOIC) is based on the industrial standard of the day, which is currently the North American Industry Classification System (NAICS) 2007. The IOIC uses a coding scheme that resembles NAICS, but is modified to reflect the hierarchical structure and organization of the IOIC. The NAICS definition of the IOIC classes as well as its hierarchical structure can be found in "Input-Output Classification" at the following link: <http://www.statcan.gc.ca/imdb-bmdi/1401-eng.htm>. The hierarchical structure of the Input-Output Commodity Classification (IOCC) and the Input-Output Final Demand Classification (IOFDC) can be found at the same link.
- Due to confidentiality reasons, the industries at the level of aggregation W: 311310 sugar manufacturing and 3113A0 confectionery product manufacturing will not be available after year 2004. These two industries will be aggregated in 2005 to the new W industry 311300 sugar and confectionery manufacturing.
