**SCHOOL ENROLLMENT BY LEVEL OF SCHOOL FOR THE POPULATION
3 YEARS AND OVER (AMERICAN INDIAN AND ALASKA NATIVE ALONE)**
**Universe: American Indian and Alaska Native alone population 3 years
and over**
2010 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, for 2010, the 2010 Census provides the [official counts of the population and housing units for the nation, states, counties, cities and towns](#).

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the [Data and Documentation](#) section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the [Methodology](#) section.

	Alaska	
	Estimate	Margin of Error
Total:	98,288	+/-3,430
Enrolled in school:	31,010	+/-2,042
Enrolled in nursery school, preschool	2,327	+/-602
Enrolled in kindergarten	2,172	+/-560
Enrolled in grade 1	1,714	+/-438
Enrolled in grade 2	1,847	+/-538
Enrolled in grade 3	2,164	+/-591
Enrolled in grade 4	2,181	+/-604
Enrolled in grade 5	1,654	+/-438
Enrolled in grade 6	1,693	+/-429
Enrolled in grade 7	2,021	+/-627
Enrolled in grade 8	1,919	+/-575
Enrolled in grade 9	1,450	+/-336
Enrolled in grade 10	2,115	+/-585
Enrolled in grade 11	1,356	+/-377
Enrolled in grade 12	2,218	+/-490
Enrolled in college, undergraduate years	3,543	+/-865
Graduate or professional school	636	+/-390
Not enrolled in school	67,278	+/-2,733

Explanation of Symbols:

An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see [Accuracy of the Data](#)). The effect of nonsampling error is not represented in these tables.

While the 2010 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
