Table summary

Census years			Median		
	0 to 14 years	15 to 64 years	65 years and over	Total	age <u>⁵</u>
2011	32.7	64.0	3.3	100.0	24.1
2001	37.1	60.7	2.2	100.0	22.1
1991 ¹					
1981 ¹					
1971 ¹					
1961 ²					
1951 ³					
1941 ⁴					
1931 ⁴					
1921 ⁵					

Notes:

- 1. Prior to its creation as a territory on April 1, 1999, Nunavut was part of the Northwest Territories.
- 2. Prior to its creation as a territory on April 1, 1999, Nunavut was part of the Northwest Territories. The figures for this census year have not been subjected to random rounding.
- 3. Prior to its creation as a territory on April 1, 1999, Nunavut was part of the Northwest Territories. The figures for this census year have not been subjected to random rounding. Median age is calculated from population estimates for this census year.
- 4. Prior to its creation as a territory on April 1, 1999, Nunavut was part of the Northwest Territories. The figures for this census year have not been subjected to random rounding. Median age is calculated from population estimates for this census year. Newfoundland and Labrador became a province of Canada in 1949.
- 5. Prior to its creation as a territory on April 1, 1999, Nunavut was part of the Northwest Territories. The figures for this census year have not been subjected to random rounding. Median age is calculated from population estimates for this census year. Newfoundland and Labrador became a province of Canada in 1949.

 The figure for 1921, Canada, includes 485 members of the Royal Canadian Navy whose province of residence is not known
- 6. The median age is an age 'x', such that exactly one half of the population is older than 'x' and the other half is younger than 'x'.

Data quality note(s)

• Data quality index showing a global non response rate higher than or equal to 10% but lower than 25%.

Random rounding and percentage distributions:

To ensure the confidentiality of responses collected for the 2011 Census, a random rounding process is used to alter the values reported in individual cells. As a result, when these data are summed or grouped, the total value may not match the sum of the individual values, since the total and subtotals are independently rounded. Similarly, percentage distributions, which are calculated on rounded data, may not necessarily add up to 100%.
