Global non-response rate (GNR)⁵ = 25.2 %

Age groups of primary household maintainer (13)	Housing tenure (4)			
	Total - Housing tenure	Owner	Renter	Band housing
Total - Age groups of primary household maintainer ⁶	8,665	1,820	6,845	0
Under 25 years	520	50	475	0
25 to 29 years	1,040	120	925	0
30 to 34 years	1,170	170	1,000	0
35 to 39 years	1,080	190	885	0
40 to 44 years	1,175	255	925	0
45 to 49 years	1,040	270	770	0
50 to 54 years	860	240	620	0
55 to 59 years	695	225	470	0
60 to 64 years	515	185	335	0
65 to 69 years	260	70	190	0
70 to 74 years	145	35	110	0
75 years and over	165	30	135	0

1 **Shelter-cost-to-income ratio** - Percentage of a household's average total monthly income which is spent on shelter-related expenses. Those expenses include the monthly rent (for tenants) or the mortgage payment, property taxes and condominium fees (for owners) and the costs of electricity, heat, municipal services, etc. The percentage is calculated by dividing the total shelter-related expenses by the household's total monthly income and multiplying the result by 100.

The relatively high shelter costs to household income ratios for some households may have resulted from the difference in the reference period for shelter costs and household total income data. The reference period for shelter cost data is 2011, while household total income is reported for the year 2010. As well, for some households, the 2010 household total income may represent income for only part of a year.

Household total income - The total income of a household is the sum of the total incomes of all members of that household. Total income refers to the total of income from all sources, including employment income, income from government programs, pension income, investment income and any other money income, before income taxes and deductions, during the calendar year 2010.

2 **Housing suitability and the National Occupancy Standard (NOS)** on which it is based were developed by Canada Mortgage and Housing Corporation (CMHC) through consultations with provincial housing agencies.

3 **Household total income** - The total income of a household is the sum of the total incomes of all members of that household.

Total income - Total income refers to monetary receipts from certain sources, before income taxes and deductions, during calendar year 2010. It includes employment income from wages, salaries, tips, commissions and net income from self-employment (for both unincorporated farm and non-farm activities); income from government sources, such as social assistance, child benefits, employment insurance, Old Age Security pension, Canada or Quebec pension plan benefits and disability income; income from employer and personal pension sources, such as private pensions and payments from annuities and RRIFs; income from investment sources, such as dividends and interest on bonds, accounts, GICs and mutual funds; and other regular cash income, such as child support payments received, spousal support payments (alimony) received and scholarships. The monetary receipts included are those that tend to be of a regular and recurring nature. It excludes one-time receipts, such as lottery winnings, gambling winnings, cash inheritances, lump sum insurance settlements, capital gains and RRSP withdrawals. Capital gains are excluded because they are not by their nature regular and recurring. It is further assumed that they are less likely to be fully spent in the period in which they are received, unlike income that is regular and recurring. Also excluded are employer's contributions to registered pension plans, Canada and Quebec pension plans, and employment insurance. Finally, voluntary inter-household transfers, imputed rent, goods and services produced for barter, and goods produced for own consumption are excluded from this total income definition.

Median income of households - The median income of a specified group of households is that amount which divides their income size distribution, ranked by size of income, into two halves. That is, the incomes of the first half of the households are below the median, while those of the second half are above the median. Median incomes of households are normally calculated for all units in the specified group, whether or not they reported income.

Average income of households - Average income of households refers to the weighted mean total income of households in 2010. Average income is calculated from unrounded data by dividing the aggregate income of a specified group of households (for example, two person households) by the number of households in that specific group, whether or not they reported income.

4 **Household type** - Refers to the basic division of private households into family and non-family households. Family household refers to a household that contains at least one census family, that is, a married couple with or without children, or a couple living common law with or without children, or a lone parent living with one or more children (lone-parent family). One-family household refers to a single census family (with or without other persons) that occupies a private dwelling. Multiple-family household refers to a household in which two or more census families (with or without additional persons) occupy the same private dwelling. Family households may also be divided based on the presence of persons not in a census family.

Non-family household refers to either one person living alone in a private dwelling or to a group of two or more people who share a private dwelling, but who do not constitute a census family.

5 For the 2011 National Household Survey (NHS) estimates, the global non-response rate (GNR) is used as an indicator of data quality. This indicator combines complete non-response (household) and partial non-response (question) into a single rate. The value of the GNR is presented to users. A smaller GNR indicates a lower risk of non-response bias and as a result, lower risk of inaccuracy. The threshold used for estimates' suppression is a GNR of 50% or more. For more information, please refer to the National Household Survey User Guide, 2011.

6 **Primary household maintainer** - The first person in the household identified as being a household maintainer.

The order of the persons in a household is determined by the order in which the respondent lists the persons on the questionnaire. Generally, an adult is listed first followed, if applicable, by that person's spouse or common-law partner and by their children. The order does not necessarily correspond to the proportion of household payments made by the person.

Age - Refers to the age at last birthday before the reference date, that is, before May 10, 2011.
