Footnotes:

1. Sources: Statistics Canada, Canadian Vital Statistics, Death Database and Demography Division (population estimates)
2. Numbers and rates on this table are based on the summation of five consecutive years of deaths data.
3. Rates in this table exclude: deaths of non-residents of Canada; deaths of residents of Canada whose province or territory of residence was unknown; and, deaths for which age or sex decedent was unknown.
4. The geographic distribution of deaths in this table is based on the place of residence of the deceased.
5. Numbers and rates for Canada include deaths for Inuit Nunangat.
6. Inuit Nunangat is comprised of four regions created through the signing of land claims agreements and from west to east includes the Inuvialuit Region in the Northwest Territories, Nunavut, Nunavik north of the 55th parallel in Quebec and Nunatsiavut in northern Labrador (Inuit Tapiriit Kanatami, 2008).
7. Population estimates for are based on the 2001 Census adjusted for net undercoverage and components of population growth. For 1996, population estimates are final intercensal, for 2001 they are final postcensal, and for 2006 they are updated postcensal.
8. The mortality rate is calculated as follows: the total deaths for the five reference years are divided by five times the population estimate of the middle year of the five reference years.
9. Age-standardized to the 2001 total population age structure of Inuit Nunangat.
10. The confidence intervals were produced via the Fleiss method (Fleiss JL, Statistical Methods for Rates and Proportions, 2nd Ed, Wiley and Sons, NY, 1981, page 14, Formula (1.26) and (1.27)).
11. The 95% confidence interval (CI) illustrates the degree of variability associated with a number or a rate. Wide confidence intervals indicate high variability and thus the rates associate with them should be interpreted and compared with caution.
12. World Health Organization (WHO), International Statistical Classification of Diseases and Related Health Problems, Tenth Revision (ICD-10)
13. In 2006, new Census geography identified the reserve of Natuashish, within the unorganized territory of Division No. 10, Subd. E. As a result, the latest data for Nunatsiavut are based on different boundaries excluding this reserve, which contained 706 people as of 2006 Census, and represent about 23% of the Nunatsiavut population.
