2013 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the [Data and Documentation](#) section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the [Methodology](#) section.

1 - 29 of 29		Alaska	
		Estimate	Margin of Error
	Total:	42,317	+/-2,798
	Male:	23,746	+/-2,013
	Enrolled in school:	18,656	+/-1,984
	Employed	5,438	+/-1,452
	Unemployed	2,003	+/-838
	Not in labor force	11,215	+/-1,778
	Not enrolled in school:	5,090	+/-962
	High school graduate (includes equivalency):	4,036	+/-846
	Employed	2,960	+/-840
	Unemployed	555	+/-240
	Not in labor force	521	+/-231
	Not high school graduate:	1,054	+/-378
	Employed	381	+/-309
	Unemployed	161	+/-210
	Not in labor force	512	+/-236
	Female:	18,571	+/-1,898
	Enrolled in school:	15,545	+/-1,894
	Employed	4,300	+/-1,082
	Unemployed	1,383	+/-746
	Not in labor force	9,862	+/-1,539
	Not enrolled in school:	3,026	+/-934
	High school graduate (includes equivalency):	1,683	+/-459
	Employed	874	+/-328
	Unemployed	238	+/-146
	Not in labor force	571	+/-321
	Not high school graduate:	1,343	+/-774
	Employed	337	+/-358
	Unemployed	68	+/-81
	Not in labor force	938	+/-572

Explanation of Symbols:

An '*' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An '^' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

An '^-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An '+^' following a median estimate means the median falls in the upper interval of an open-ended distribution.

An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see [Accuracy of the Data](#)). The effect of nonsampling error is not represented in these tables.

In data year 2013, there were a series of changes to data collection operations that could have affected some estimates. These changes include the addition of Internet as a mode of data collection, the end of the content portion of Failed Edit Follow-Up interviewing, and the loss of one monthly panel due to the Federal Government shut down in October 2013. For more information, see: [User Notes](#)

Employment and unemployment estimates may vary from the official labor force data released by the Bureau of Labor Statistics because of differences in survey design and data collection. For guidance on differences in employment and unemployment estimates from different sources go to [Labor Force Guidance](#).

While the 2013 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.
