EMPLOYMENT STATUS BY DISABILITY STATUS AND TYPE Universe: Civilian noninstitutionalized population 18 to 64 years 2013 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Versions of this table are available for the following years:

		Alaska	
1		Estimate	Margin of Error
9	Total:	459,776	+/-2,193
of 9	In the labor force:	364,406	+/-4,855
	Employed:	333,046	+/-5,226
	With a disability:	22,297	+/-2,593
	With a hearing difficulty	8,057	+/-1,347
	With a vision difficulty	3,726	+/-990
	With a cognitive difficulty	6,921	+/-1,877
	With an ambulatory difficulty	8,464	+/-1,607
	With a self-care difficulty	2,455	+/-895
	With an independent living difficulty	4,135	+/-1,601
	No disability	310,749	+/-5,037
	Unemployed:	31,360	+/-2,723
	With a disability:	3,462	+/-977
	With a hearing difficulty	894	+/-362
	With a vision difficulty	526	+/-241
	With a cognitive difficulty	1,705	+/-632
	With an ambulatory difficulty	1,183	+/-663
	With a self-care difficulty	575	+/-568
	With an independent living difficulty	953	+/-614
	No disability	27,898	+/-2,608
	Not in labor force:	95,370	+/-4,505
	With a disability:	20,875	+/-2,212
	With a hearing difficulty	3,721	+/-822
	With a vision difficulty	3,089	+/-870
	With a cognitive difficulty	9,831	+/-1,651
ľ	With an ambulatory difficulty	13,358	+/-1,728
ľ	With a self-care difficulty	5,906	+/-1,342
ľ	With an independent living difficulty	9,156	+/-1,728
ľ	No disability	74,495	+/-3,854

Explanation of Symbols:

An '**' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "***** entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling

variability is not appropriate.

An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed

because the number of sample cases is too small.

An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling variability and the content of the Data is the Content of the Content of the Content of the Data is the Content of the Content error is not represented in these tables.

In data year 2013, there were a series of changes to data collection operations that could have affected some estimates. These changes include the addition of Internet as a mode of data collection, the end of the content portion of Failed Edit Follow-Up interviewing, and the loss of one monthly panel due to the Federal Government shut down in October 2013. For more information, see: User Notes

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2013 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
