

TENURE BY HOUSEHOLD SIZE BY AGE OF HOUSEHOLDER
Universe: Occupied housing units
2013 American Community Survey 1-Year Estimates

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the [Data and Documentation](#) section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the [Methodology](#) section.

1 - 23 of 23	Alaska	
	Estimate	Margin of Error
	Total:	246,015 +/-2,720
	Owner occupied:	156,107 +/-3,268
	1-person household:	32,198 +/-2,491
	Householder 15 to 54 years	10,985 +/-1,805
	Householder 55 to 64 years	10,485 +/-1,411
	Householder 65 to 74 years	5,546 +/-1,072
	Householder 75 years and over	5,182 +/-949
	2-or-more person household:	123,909 +/-3,320
	Householder 15 to 54 years	71,447 +/-3,215
	Householder 55 to 64 years	30,476 +/-1,634
	Householder 65 to 74 years	15,718 +/-1,261
	Householder 75 years and over	6,268 +/-848
	Renter occupied:	89,908 +/-3,375
	1-person household:	30,602 +/-2,490
	Householder 15 to 54 years	19,272 +/-1,933
	Householder 55 to 64 years	6,308 +/-1,002
	Householder 65 to 74 years	3,080 +/-948
	Householder 75 years and over	1,942 +/-534
	2-or-more person household:	59,306 +/-3,205
	Householder 15 to 54 years	52,453 +/-2,903
	Householder 55 to 64 years	4,813 +/-845
	Householder 65 to 74 years	1,643 +/-607
	Householder 75 years and over	397 +/-250

Explanation of Symbols:

An "****" entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.

An "-" entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

An "-" following a median estimate means the median falls in the lowest interval of an open-ended distribution.

An "+" following a median estimate means the median falls in the upper interval of an open-ended distribution.

An "*****" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "*****" entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.

An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.

An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see [Accuracy of the Data](#)). The effect of nonsampling error is not represented in these tables.

In data year 2013, there were a series of changes to data collection operations that could have affected some estimates. These changes include the addition of Internet as a mode of data collection, the end of the content portion of Failed Edit Follow-Up interviewing, and the loss of one monthly panel due to the Federal Government shut down in October 2013. For more information, see: [User Notes](#)

While the 2013 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
