Symbol legend:

- F Too unreliable to be published
E Use with caution

Footnotes:

1. Sources: Aboriginal Peoples Survey 2001, 2006, 2012.
2. Perceived general health is an indicator of overall health status. Respondents were asked: "In general, would you say your health is... Excellent? Very good? Good? Fair? Poor?".
3. The Inuit population includes persons who reported being "Inuk (Inuit)" in the Aboriginal Peoples Survey either as their only Aboriginal identity or as part of a multiple identity including "Inuk (Inuit)" and "First Nations" and/or "Métis".
4. Inuit Nunangat is the homeland of Inuit of Canada. It includes communities in Nunatsiavut (Northern coastal Labrador), Nunavik (Northern Quebec), the territory of Nunavut and the Inuvialuit region (Northwest Territories). These regions collectively encompass the area traditionally occupied by Inuit in Canada.
5. Excludes persons living on Indian reserves or settlements.
6. Age is derived from the respondent's date of birth. In 2001, the Census day of May 15, 2001 was used as the reference date to determine age. In 2006, age was determined from the Aboriginal Peoples Survey reference date of October 31, 2006, and in 2012, age was determined from the Aboriginal Peoples Survey reference date of February 1, 2012.
7. Proxy reporting was used in the 2012 Aboriginal Peoples Survey for most children aged 6 to 14 years, nearly half of youth aged 15 to 17 years and for adults in certain specific situations (for example when the selected adult was not able to answer for health related reasons, due to a language barrier, or because the selected respondent was going to be away from home for the duration of the survey.)
8. In 2001, some respondents did not provide a date of birth, and some dates of birth that were provided were invalid. In such cases, the respondent's age was determined from 2001 Census data wherever possible. Otherwise, age was reported as being "not stated or invalid".
9. All percentages for the variable "perceived general health" are calculated using the number of persons in "total, perceived general health" as denominator.
10. This category includes persons who rated their health as "excellent" or whose health was rated as "excellent" by someone knowledgeable about them. This is the most positive rating on the perceived health scale, a five-point scale ranging from "excellent" to "poor".
11. This category includes persons who rated their health as "very good" or whose health was rated as "very good" by someone knowledgeable about them. This is one point on the perceived health scale, a five-point scale ranging from "excellent" to "poor". The rating "very good" comes between "excellent" and "good".
12. This category includes persons who rated their health as "good" or whose health was rated as "good" by someone knowledgeable about them. This is the midpoint on the perceived health scale which is a five-point scale ranging from "excellent" to "poor".
13. This category includes persons who rated their health as "fair" or "poor" or whose health was rated as "fair" or "poor" by someone knowledgeable about them. These are the most negative ratings on the perceived health scale, a five-point scale ranging from "excellent" to "poor".
14. "Perceived general health not specified" consists of item non-response ("Refusal", "Don't know", and "Not stated").
15. When comparing estimates, it is important to use confidence intervals to determine if differences between values are statistically significant. Confidence intervals describe sampling variability and give an indication of the precision of a given estimate. Bootstrapping techniques were used to produce the coefficient of variation (CV) and 95% confidence intervals (CIs).
16. Data with a coefficient of variation (CV) from 16.6% to 33.3% are identified by an (E) and should be interpreted with caution.
17. Data with a coefficient of variation (CV) greater than 33.3% were suppressed (F) due to extreme sampling variability.
18. The standard symbol (..) is used in this Statistics Canada table for figures not available for a specific reference period.
